

Hoan Doan Van Quoc

DATA SCIENCE INTERNSHIP

PROFILE

I am currently a student majoring in artificial intelligence at FPT University, with an interest in data, wanting to work with big numbers. My future goal is to become a data analysis expert. I am someone who always wants to explore and learn new things, want to face pressure and challenges to train myself. And I myself hope that I will have an opportunity to develop myself better in this business internship term.

EDUCATION

2021-2024

FPT UNIVERSITY

- Artificial Intelligence major

LANGUAGES

- English (Fluent)

PROJECT

- **Machine learning model for prediction: Red River water level.** Dec 2023 - April 2024

With data sources on the Red River water level collected at Vu Quang, Hung Yen, and Hanoi stations, we preprocessed and then applied machine learning models as well as hybrid models to evaluate the appropriate model for the problem. My tasks in this project are:

- Research and develop machine learning models KNN, and SVM from available papers and improve model accuracy through parameter processing and time step processing.
- Determine the time step used in data division applicable to problems with time series data.

- **Deep learning model for prediction: Red River water level.** Jan 2023 - July 2024

Continuing to develop a deep learning model based on the results of previous machine learning models on predicting the water level of the Red River, in this project my task is:

- Research and build CNN models and hybrid models combining CNN, LSTM and Attention Mechanism.
- Research and develop the time step used in dividing data for the learning process to optimize.
- Create statistical evaluation for the model

- **Build an optimized book search website with index - Search Engine Project** May 2024 - PRESENT

Build a website containing a search engine to search for books to see through the reviews, authors and introductions of the books, we have researched the use of indexing and clustering to reduce the search time for the tool.

- By processing the data index in MongoDB, I continue to build an optimal search function based on the index combined with an automatic spelling correction function via API.

CERTIFICATIONS

- [AI Foundations for Everyone](#) --- June 5, 2023
- [Software Development Lifecycle](#) --- Jan 13, 2024

FUNCTIONAL SKILLS

- Flexibility in collecting data from multiple sources by multiple methods.
- Ability to read and analyze data charts to make judgments about the data.
- Gain knowledge about deep learning machine learning models so that you can easily deploy and improve project models.

TECHNICAL SKILLS

- Python: Pandas, NumPy, Scikit-learn, Matplotlib, Keras.
- Database: SQL Server, MongoDB.
- SoftSkills: Presentation, Critical Thinking, Time Management, Teamwork.
